Professional Summary

Full-Stack Developer specializing in Python, Flask/FastAPI, and AI-powered systems, with hands-on experience building scalable web applications and Retrieval-Augmented Generation (RAG) pipelines. Proven ability to design secure REST APIs, optimize backend performance, and integrate LLM-based features into real-world products. Passionate about building intelligent, user-centric applications.

Technical Skills

Languages: Python, JavaScript, SQL

Backend: Flask, FastAPI, REST API Design, JWT Authentication, OOP

Frontend: HTML5, CSS3, JavaScript (ES6+), Bootstrap, Jinja2

Databases: PostgreSQL, MySQL, SQLite, Relational Database Design

AI & Tools: FAISS, Sentence-Transformers, Google Gemini API, RAG Pipelines

Developer Tools: Docker, Git, GitHub, Postman, VS Code, PyCharm

Concepts: API Integration, Authentication Systems, Debugging, Performance Optimization, Agile/Scrum

Experience

Python Full-Stack Intern

Feb 2025 – May 2025

PyGenicArc (Remote)

- Led a 4-member team in developing a Python-based web application during a collaborative internship program.
- Applied Python, Flask, SQL, and frontend integration concepts to build and present a functional project.
- Contributed to backend feature implementation, debugging, and API integration tasks.
- Collaborated in an Agile-style workflow with task distribution, project discussions, and final technical presentation.

Projects

AI-Powered PDF Intelligence Tool (RAG System) | *Python, FastAPI, FAISS, Sentence-Transformers, Gemini API*

- Built a full-stack RAG-based application enabling semantic search across multiple PDF documents.
- Implemented FAISS vector search for efficient and accurate context retrieval.
- Designed a multi-LLM architecture supporting Gemini, Groq, and OpenRouter integrations.
- Improved answer reliability by linking AI-generated responses with page-level source citations.

ChibiBytes – AI Content Discovery Platform | *Python, Flask, SQLite, JavaScript, Gemini API*

- Developed a full-stack platform with authentication, watchlists, and AI-powered recommendations.
- Integrated an LLM-based recommendation engine tailored to user preferences.
- Architected a modular backend using Flask Blueprints for maintainability and scalability.
- Built a dynamic frontend using asynchronous API calls for smoother interactions.

DailyDrop – E-Commerce Platform | *Python, Flask, SQLite, Bootstrap, JavaScript*

- Built a complete e-commerce system with cart, checkout, and order history functionality.
- Designed relational database schemas for users, products, and order management.
- Developed an admin dashboard for managing products, users, and inventory workflows.
- Implemented secure authentication and session management workflows.

Education

Master of Computer Applications (MCA)

2025 – 2027

Jain University, Bengaluru

Bachelor of Computer Applications (BCA)

Graduated

Bits Hi-Tech College, Chitradurga

CGPA: 8.07 / 10

Certifications

- Meta Full-Stack Developer Specialization – Coursera (2025)
- Python Essentials 1 – Cisco Networking Academy (2026)
